

POWERCHECK PC-4

With the battery-tester POWERCHECK PC4 it is easy to check the voltage of the battery under load. Batteries between 6V and 40V can be checked with this useful battery measuring tool. A three digit LCD monitor offers a comfortable reading. The POWERCHECK PC4 has a built-in socket for BP-90 batteries. For all other types of batteries there are different adapter cables available.

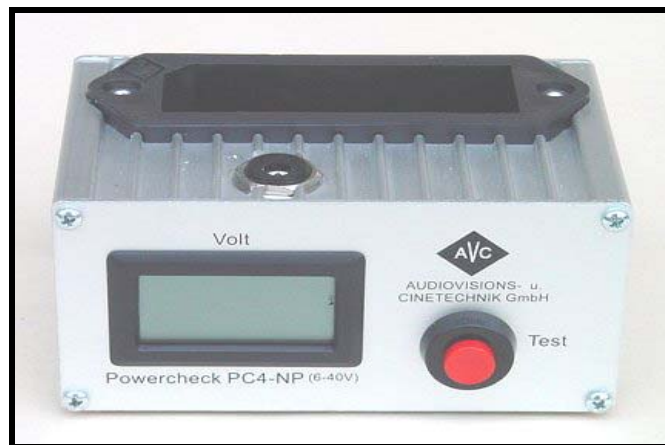

THE NP-ADAPTER

If you have already a Powercheck PC4 or the model PC3 and if NP1 power packs should be tested, there is additional necessary the NP-adapter and the suitable adapter cable. When ordering the adapter cable please specify the XLR type and wiring.

POWERCHECK PC-4 NP

Or take the POWERCHECK PC-4 NP. This battery testing unit integrates already the NP-adapter charging shell. The POWERCHECK PC4-NP has built-in a BP-90 socket which can be used to test other batteries by a suitable adapter cable. The power consumption of the battery tester is depending on the built-in resistors and on the battery voltage and will be between 1,6Ah and 4Ah.
